Table 4. Quarterly gap between the 13F book return and the fund's NAV return, in percent.

<u>Correlation</u>	<u>Quarters</u>	<u>Mean gap</u>	<u>Std of gap</u>	<u>TE of gap</u>	<u>90% interval of mean gap</u>

What a 13F book cannot see. The 13F lists a manager's long US-listed equity positions at each quarter end, filed up to 45 days later. It omits cash, shorts, most non-US shares, bonds and anything bought and sold inside the quarter. This report holds each quarter-end book unchanged for the next 3 months, so trades made during the quarter show up only in the gap between the book and the fund's NAV, together with fees and cash. A 13F belongs to the manager, not to one fund, so where a manager runs several strategies the book blends them. Sectors are Fama-French 12 industries built from SIC codes, which put payment networks such as Visa and Mastercard in Other. Securities that could not be mapped to a ticker, or had no price, earn the book's own return so that they move nothing.
